

CELL PHONE POWER CHARGING TIPS

Tips to use the TIPS

The Voyager has the capability of charging your cell phone via the built-in cell phone charging jack. Here are tips on how to use the tips.

1. See the tips photos below and see if your cell phone model is in the list. Choose the right tip.
2. Use the common cable to connect the right tip to the output from the radio to the cell phone input.
3. Make sure the connection is secure. If there is no charging sign on the cell phone when you crank the dynamo handle, re-connect the cable to both ends and make sure they are connected well.
4. For some cell phones, the charging circuit in the cell phone is specially designed for its own charger. The charging volt is preset to a certain threshold, so it is better to crank at a proper pace to generate a proper volt to charge the battery inside — you may have to crank it at a certain speed to have a steady charging. If you have any questions, please call Kaito USA for advice (909) 628 6088 or visit www.kaitousa.com
